ReadMe

Repository: https://github.com/labelinstitute/dev_DM/tree/main/Meritocracy

Software: o-Tree, stored under Software in GitHub

Data: Seven CSV files, available in the Data folder on GitHub and the data/ folder in the replication package.

Data cleaning and statistical analysis: R script, stored under Analysis Code in GitHub/ and the Code/ folder in the replication package.

Tables and Graphs: generated in R and stored in the Paper/Figs/ folder of the replication package.

Pipeline to reproduce the paper:

Data cleaning and statistical analysis: R

Tables: Generates all analysis tables (in tex format) and analysis graphs (in pdf format) (stored under Paper/Figs/).

Text in Latex: compiles text, tables and graphs in one command

References: generated in Bibtex (bib-3rdkids.bib)

Data correction. During preparation of the replication package, we identified 27 records inadvertently duplicated when merging the original school-level date files (La Línea: 6 in grade 1 and 7 in grade 2; Mérida: 8 in grade 1 and 6 in grade 2). These duplicates have already been removed from the supplied data files. The corrected analytical sample includes 2,253 participants, rather than the 2,280 observations reported in the accepted manuscript. All analyses were re-estimated using the corrected data.
